UB Safe IN JANITORIAL AND HOUSEKEEPING JOBS

Here are some things **YOU** can do to keep from getting hurt at work...

- 1) Know and follow all the safety rules and work procedures --- they're there because someone has already been hurt doing that.
- 2) Use all work equipment and safety equipment correctly --- ask your supervisor if you have any questions about doing it right!
- 3) Look out for your co-workers --- so they won't get hurt either.
- 4) Know what to do in emergency situations.
- 5) Tell your supervisor if you see something that is unsafe!
- 6) Don't do any jobs you haven't been trained to perform.

Getting hurt on the job can keep you from doing the things you love.

Hazard	How to B Safe
Falls	<p>Don't run & Don't jump up on or off of elevated areas. Remember that wet floors are SLICK! Keep aisles, doorways and stairs clear. Watch where you are going...surprises are around every corner! Keep extension cords out of aisles and other paths of travel. Use ladders to change light bulbs, not a chair, box or table.</p>
Chemical Exposure	<p>Know the hazards of the chemicals you use. Know the procedures for using the chemicals properly. Don't use different chemicals together or mix chemicals together. Wear the personal protective equipment that is designated for that chemical.</p>
Bloodborne Diseases	<p>Don't touch someone else's blood or needles. Only people who are trained in bloodborne pathogens and proper procedures can clean up blood. Wear liquid-resistant gloves if you have to clean up bloody messes.</p>
Back Injuries	<p>Get help when lifting heavy, awkward, or bulky things...use the buddy system. Don't try to carry too much. Don't bend over or twist when lifting.</p>
Electrocution	<p>Don't use electrical equipment that is damaged OR has a damaged cord. Don't clean equipment until it has been disconnected from the power supply!</p>
